

Alfahobbies AlfaMill X Axis Mill Table

The X Axis table is the part that moves right and left under the head. Its the part that you bolt parts down to when cutting them. It is made from a 1545 80/20 extrusion. 1545 stands for 1 ½ inches X 4 ½ inches. The table is 24 inches long. The ends should be cut as square as possible. Plus or minus 1 degree is close enough. There are 3 holes in each end of the extrusion. All 6 of these holes need to be tapped 5/16-18.
