

Alfahobbies AlfaMill Y Axis Bed

This is the Y Axis Bed. The Y Axis is the part that the mill table moves closer and further from you as you stand in front of the machine. It is also the part that gets mounted to a bench. It is made from an 80/20 3030 extrusion. 3030 stands for 3 inch by 3 inch. It is 18 inches long. One end should be as square as you can make it. Plus or minus 1 degree is good. One end has the four holes tapped 5/16-18 and this end should be the one that is square. The other end does not have to be tapped and doesn't have to be as perfect.
