

Alfahobbies AlfaMill Z Axis Column

This is the Z Axis Column. The Z Axis is the vertical column that the head rides up and down on. It is made from 80/20 extrusion model number 3030. The number 3030 stands for 3 inches by 3 inches. The length is 24 inches long. One end should be cut as square as possible. Plus or minus 1 degree is close enough. Four holes on the cut square end are tapped 5/16-18. The other end does not need to be tapped or as perfectly square.
