

# Alfahobbies AlfaMill Router Mount

The router mount is the part that holds the router to the machine. It is made from a 1530 80/20 extrusion. 1530 stands for 1 ½ inches by 3 inches. Cut it to 5 inches long. It doesn't have to be as square as the other parts. The 4 .265 holes are drilled through the extrusion as shown in the drawing. These are to access screw heads to attach it to the Z Axis Slide.
